War Gardens

The Government of the United States through the Department of Agriculture, is fostering a garden program, nationwide in its scope.

Through this Victory Garden program thousands of backyard gardeners in this area will supplement their normal food supply with delicious vegetables fresh from their own gardens, rich in vitamins.

It is not intended that our backyards shall supply the nation's food, nor that we take the place of farmers and market gardeners. There is no imminent food shortage. Nor was it ever intended that we should destroy a rose bush to make way for a cabbage. Grow flowers, plenty of them—we need flowers for cheer, for spiritual uplift, for courage. A recent magazine article pointed out that "We can have a garden and eat it, too."

Garden for exercise, for relaxation, for the joy that comes from working in the soil with living plants.

For Beginners Only

Success in gardening depends greatly on thorough preparation of the soil. Select a spot in full sun—poor clay soils should receive a liberal application of sheep or cattle manure. If you are going in for vegetables, start with the easiest-to-grow things: Beans, Lettuce, Tomatoes, Radishes, Carrots, Beets and Onions.

Cultivation

Most crops will enjoy frequent cultivation. After every rain, when the ground has dried sufficiently, break up the surface soil into a fine mulch. Such cultivation keeps down weeds, prevents rapid evaporation of needed moisture, and aerates the soil.

Weeds

The good gardener never allows weeds to rob the soil of plant food and moisture. Your growing things need plenty of air and sunshine. Don't allow the weeds to crowd them.

Watering

During dry spells it becomes necessary to water. This should be done thoroughly, soaking the soil to a depth of 8 or 10 inches. Avoid "sprinkling." Never wet foliage in the heat of the day. Morning is best. If watering is done in the afternoon, the foliage should be dry at sunset.

Damping Off of Seedlings

Seed planted in boxes and frames are subject to a fungus disease known as "damping off." The seedlings fall over as though pinched at the base of the stem. There is no cure for the plants affected.

Louisville Lawn Mixture

This blend of fine-leaved grasses with White Dutch Clover is recommended for use in reseeding established lawns, patching thin spots, and for seeding newly graded yards where a permanent stand of Kentucky Blue Grass is desired. Ready for cutting after 30 days of good weather. This seed should be broadcast evenly to avoid a patchy appearance. Seed should be sown at the rate of 1 pound for every 300 square feet, selecting a time when there is no wind. After sowing, roll or rake lightly.

To prevent damping off:

Avoid sowing seed too thickly.
Water seed pans from below.
Never water in late afternoon.
Give plenty of air and sunshine.
Use SEMESAN as directed by the manufacturers.

Insect Pests

Garden pests generally may be divided into two classes, the sucking insects and the chewing insects. The chewing insects are the most prevalent in the vegetable garden. The beetles, caterpillars, cabbage and tomato worms, snails, and grasshoppers belong to the chewing class and are controlled by stomach poison and poisoned bait. Arsenate of lead is the most used poison. Sucking insects (the green aphis is most common) are controlled with contact sprays such as Black-Leaf 40 (Nicotine Sulphate) Rotenone and Pyrethriem.

Plant Diseases

The most common plant diseases are the fungous attacks on roses, grapes, delphiniums, lilacs and certain annual flowers. Bordeaux Mixture or dusting sulfur may be used for the control of powdery mildew and black-spot of roses. Grapes and tomatoes should be sprayed with Bordeaux as soon as the fruits are formed. Either of these suggested treatments may be used on phlox, hollyhock and zinnias.

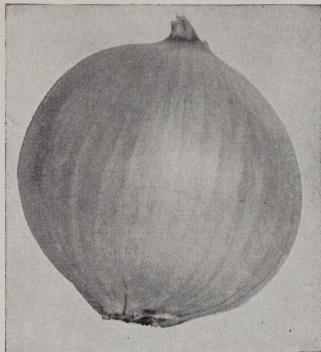

A Complete Spray

In the preceding paragraphs we have briefly shown our chief garden enemies—disease, chewing insects and sucking insects. In most cases all three may be effectively sprayed by combining Bordeaux, Arsenate of Lead and Black-Leaf 40 (Nicotine Sulphate).

REGALE LILY

Large, fragrant, white blooms. 30c each, \$3.00 per dozen.

For succession of bloom and a continuous supply of cut flowers, plant a few gladiolus bulbs every two weeks until the end of June. Gladiolus require a minimum of care. Cover the bulbs with 3½ inches of soil and keep well cultivated until buds are formed.

When growth is well started, they will repay for a top-dressing of sheep manure. Water well during dry spells if you would have blooms of exhibition quality.

When frost is imminent, cut the foliage well above the soil. Dig and spread out to cure. Three weeks after harvest the bulbs may be cleaned and stored.

A sprinkling of naphthalene flakes will destroy any thrips that might be present.

ROSES

Those who have used our roses in the past are well aware of the high quality of the plants we send out. The beginner would do well to start out with strong, thrifty bushes, such as we offer, keeping in mind that success with roses depends upon constant cultivation with the proper amount of plant food and generous watering when necessary. Keep constantly on the alert against insects and disease.

Autumn. H. T. Burnt-orange and red. Notable for its strikingly rich fall bloom. 75c each.

Betty Upchard. H. T. Delicate salmon-pink flowers with a suggestion of carmine. Fragrant. Its popularity as a pink rose is well deserved. 75c each.

Caledonia. H. T. Full double flowers of pure white, borne on strong canes. If you are looking for a good white rose, try Caledonia. 75c ea.

Cecile Brunner. (Polyantha). This is the true "Sweetheart" rose in demand for its tiny, but exquisitely formed light pink buds. 75c each.

Charles P. Kilham. H. T. Brilliant orange flowers suffused with glowing scarlet. 75c each.

Christopher Stone. H. T. A new scarlet rose of unusual brilliance, the growth is vigorous and upright. The delicious fragrance of the blooms, together with size and excellent keeping qualities, assure great popularity for this rose. 85c ea.

Comdesa De Sastago. H. T. Reddish copper inside with rich gold reverse. The striking flowers are borne on vigorous branching plants. An unusual rose which is sure to make many friends. 75c each.

Dainty Bess. H. T. Single. This is the most popular of all single roses, having five broad petals of soft rose-pink and wine-colored stamens. This lovely rose has a charm all its own, and deserves a place in every garden. 75c each.

Dame Edith Helen. H. T. Large, double, pink flowers of perfect form held on strong stems. A winner at many exhibitions. Sweet-scented. 75c each.

Director Rubio. H. T. Bright cochineal red flower on strong stems. 75c each.

Duquesa De Penaranda. H. T. A beautiful flower described as cinnamon-peach or copper-apricot. The fragrant flowers are held on strong, upright growth, making it a splendid variety for cutting. 75c each.

Edith Nellie Perkins. H. T. A beautiful two-toned salmon-pink. The long-pointed buds are produced in abundance. The fragrant flowers are excellent for cutting. 75c each.

Editor McFarland. H. T. Brilliant, clear pink flowers with strong stems. Last well when cut. 75c each.

Etoile de Hollande. H. T. We consider this the best red rose. The flowers are fragrant, large and beautiful. The canes are strong and the foliage healthy. 75c each.

Federico Casas. H. T. Coppery pink and orange. Splendid as a garden subject as well as for cutting. 75c each.

Heinrich Gaede. H. T. Spectacular nasturtium-red of exhibition quality. Beautiful foliage. 75c each.

Joanna Hill. H. T. Creamy yellow buds flushed with orange at the base. Borne on strong canes. 75c each.

Kaisserin Auguste Viktoria. H. T. A fragrant pure white. 75c each.

Mme. Joseph Perraud. H. T. Long, slender buds of nasturtium-orange opening to pink buff. Rare fragrance. An excellent flower for cutting or exhibition. 75c each.

Miss Rowena Thom. H. T. Enormous rose-pink blooms of delicious fragrance. A descendant of Radiance, it has healthy foliage. 75c each.

Mrs. E. P. Thom. H. T. Medium-sized clear canary-yellow. Free blooming. 75c each.

Mrs. Pierre S. DuPont. H. T. Long, pointed buds of fadeless yellow, borne on healthy foliage. 75c each.

Mrs. Sam McGurdy. H. T. Long scarlet orange buds opening to full-cupped flowers of orange-rose. A splendid flower, excellent for cutting. 75c each.

President Herbert Hoover. H. T. Flame, scarlet and yellow. As a garden rose, it is far superior to Talisman. 75c each.

Radiance. H. T. Well-known globular flowers of rose-pink. 50c each.

Red Radiance. H. T. Rose-red flower borne on strong stem. 50c each.

Senora Gari. H. T. Orange buds opening to large flowers of buff-apricot self. A new color in roses which will surely become popular. 75c each.

Sister Therese. H. T. Golden daffodil-yellow flowers on sturdy long canes. 75c each.

Talisman. H. T. Scarlet-orange and rich yellow. 75c each.

CLIMBING ROSES

Climbing American Beauty. The strong, disease-resistant growth bears a wealth of flowers identical with its parent, the American Beauty. 75c each.

Climbing Talisman. Climbing form of the well-known bi-color rose. 75c each.

Mme. Gregoire Staechelin. (Spanish Beauty). The pointed pearl-pink buds are held on stems of such length as to make them excellent for cutting. The flowers are borne in profusion. 75c each.

Mermaid. Single, sulphur yellow flowers borne continuously through the season. Leathery foliage. 75c each.

New Dawn. An ever-blooming sport of Dr. Van Fleet, and the flowers are identical. Dainty pink flower. Blooms from early summer till frost. Plant patent No. 1. \$1.50 each.

Paul's Scarlet Climber. H. W. Intense scarlet flowers. Very popular. 75c each.

CARE OF ROSES

Planting. It should be borne in mind that roses will do much better in well-drained clay soil with plenty of sun. The plants should be set out as soon as received. The rose beds should be so planned that they will be at least three feet wide, but never more than six feet in width. Holes to receive plants should be dug at least fifteen inches deep and equally wide, so that the roots may be spread easily. Well-rotted cow manure and a little bone meal may be incorporated with the soil. Fill in earth and pack firmly so as to leave no air pockets. The juncture of the root stock and stems should be just beneath the surface. Newly-planted roses should be well watered. We recommend placing Hybrid Tea Rose bushes eighteen inches apart. A little crowding makes for longer and stronger stems.

Pruning. For best results the Hybrid Teas should be cut back to about six or eight inches, leaving an outside bud at the top of the cane. Climbing roses bloom on canes of the previous season's growth, hence the old wood should be cut out each year.

Fertilizing. A handful of bone meal and a four-inch pot full of sheep manure should be worked into the surface soil. This will insure luxuriant growth, good stems and flowers of splendid substance.

Winter Protection. In late fall or early winter, earth should be heaped over the crowns to a depth of at least ten inches. If available, cow manure should be placed around the mounds. This holding-up process will protect the bushes against the drying action of winter winds, frost, and sun.

About the last week in March the winter cover should be removed, fertilizer applied and the bed raked off smooth.

Summer Care. A top dressing of peat moss not only gives the rose bed a neat appearance, but causes better growth by conserving moisture and keeping down weeds. Grass clippings may be used instead of peat moss. If no mulch is used, keep the top soil pulverized with a sharp rake. After every rain, the crust should be broken up as soon as the ground is mellow enough to work.

Insects and disease will inevitably do much damage unless preventative measures are taken. Dust thoroughly once a week with Massey's dust or spray with a combination of Bordeaux Mixture and Arsenate of Lead. When plant lice appear, spray thoroughly with Black Leaf 40 or Evergreen.
